

STEAM BOARD TRAINING

OPTIMIZING YOUR STEAM & CONDENSATE SYSTEMS

Explore steam basics, trap operation and best practice applications in our Steam & Hot Water seminars. These sessions are offered on back-to-back days so you can attend one day or both depending on your needs.

These seminars begin with the basics, move on to best methods for installations and application, and conclude by exploring ways to maximize the return on your energy investment. See firsthand how utility systems operate throughout the training with our functional and cutaway equipment.

Participants will leave with a better understanding of how to identify, measure, and eliminate system energy losses. Additionally, we will take an in-depth dive into the advantages of proper piping practices that are critical to system efficiency.
